LUBRY KNIT

Yarn lubrication for flat and circular knitting machines

LUBRY KNIT is the yarn lubrication device Nuova Rimates developed for knitwear, in answer to the industry's constant drive for higher quality at lower production cost.

It fits both flat and circular machines. As the yarn is knitted it runs over a lubricating element that sharply reduces friction and improves glide.

Stainless-steel element

The yarn runs over a special stainless-steel fabric, suitable for all natural and man-made yarns, including blends.

Benefits

- On circular machines: markedly lower needle and sinker consumption
- On flat machines: higher productivity by removing the winding/waxing step
- Less static electricity and fewer machine stops
- Less dust and airborne fibre
- Higher yarn tenacity and glide

Installation

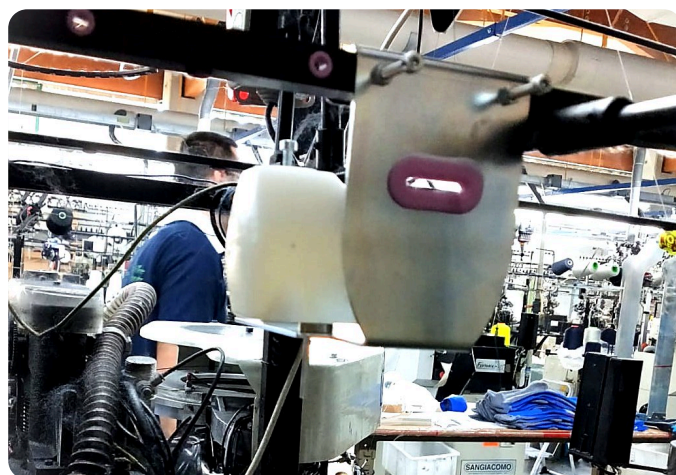

- 200 cc oil reservoir built into the device, lasting several working days
- Fits any flat or circular knitting machine
- No adjustment needed for yarn type or count

When requesting a quote, please specify

- Flat or circular machine
- Machine model and number of yarn feed positions

Technical data

Reservoir capacity	200 cc
Machines	Flat and circular
Lubricating element	Stainless-steel fabric
Yarns	Natural and man-made, including blends

Applications: Knitwear · Hosiery · Flat and circular machines
